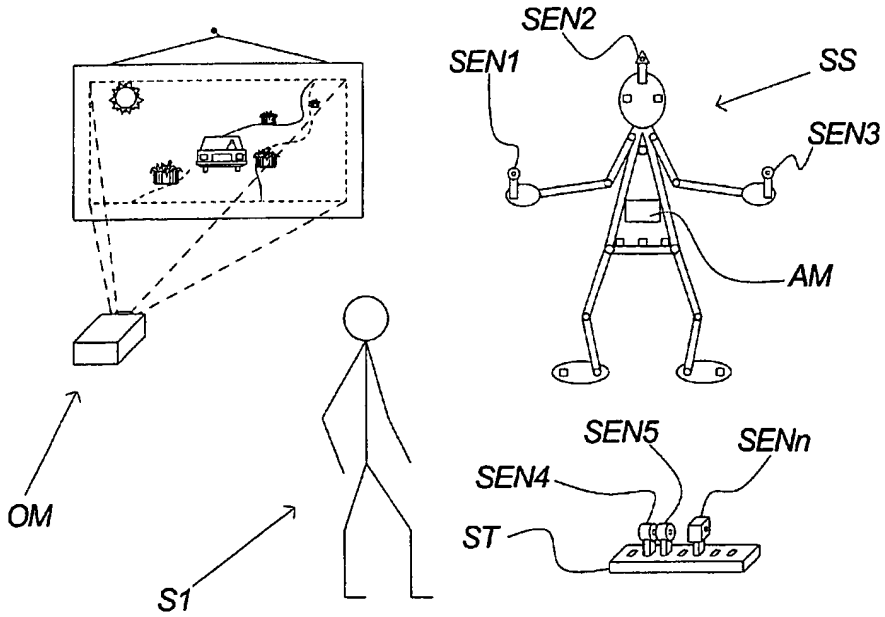
(54) Title: ADAPTIVE MOTION DETECTION INTERFACE AND MOTION DETECTOR



(57) Abstract: The invention relates to a user interface means comprising : motion detection means (MDM), output means (OM) and adaptation means (AM) adapted for receipt of motion detection signals (MDS) obtained by said motion detection means (MSM), establishing an interpretation frame on the basis of said motion detection signals (MDS) and establishing and outputting communication signals (CS) to said output means (OM) on the basis of said motion detection signals(MDS) and said interpretation frame. According to the invention, user interface means have been established for the use of interpreting motion provided by a user of the user interface means.
